

AI-POWERED QA

Turn any requirement into top-tier test cases.

Paste a requirement, pick your platform and AI provider, and get structured, de-duplicated, executable test cases — in seconds. Your keys. Your data.

Try it free →

6 AI providers · 14 platforms · v12.21

THE PROBLEM

Writing test cases is slow, manual, and inconsistent.

- QA engineers spend **hours** hand-writing test cases for every requirement
- Coverage depends on **who** writes them — gaps, duplicates, vague steps creep in
- Enterprise platforms (D365, Salesforce, SAP...) need deep, **domain-specific** knowledge
- Requirements change constantly — test suites **fall behind**
- Generic AI chat gives shallow, non-executable, **hallucinated** steps

THE SOLUTION

Paste a requirement. Get test cases a QA lead would approve.

1 · Paste

Drop in a requirement, user story, or Jira ticket — plain English.

2 · Pick

Choose your platform and your AI provider (or auto-detect).

3 · Generate

Structured, de-duplicated, executable test cases stream in live.

Zero-hallucination. Numbered steps. Specific, assertable results — then refine, export, or push to your tracker.

AT A GLANCE

COVERAGE

14 platforms — web to deep enterprise

GENERAL

ENTERPRISE

Dynamics 365

Salesforce

SAP

Oracle

Workday

Guidewire

ServiceNow

Each platform uses module-aware terminology, security roles, and integration touchpoints.

QUALITY

Why the output is actually usable

- Clarification gate — asks smart questions when a requirement is too thin
- ≥ 10 numbered steps where realistic — never one-liners
- Zero generic results — every expected result is **specific and assertable**
- No duplicates — happy path, negative, boundary, role, data & integration
- Zero hallucination — flags `[needs confirmation]` instead of inventing fields

TRUST

Privacy by design — your keys, your data

- **API keys live only in your browser's localStorage**
- Requests pass through a lightweight proxy that forwards to your provider — **never logs or stores** your keys or the requirements you paste in
- **Azure OpenAI runs in your own Azure region for data residency**
- No tracking cookies. Generated test cases never leave your browser.

WORKFLOW

Fits your existing toolchain

Push to your tracker

Azure DevOps — push selected test cases as Test Cases / work items.

Jira — pull a ticket in as the requirement.

Selection-scoped: only the rows you check.

Export anywhere

Excel · PDF · Markdown

Jira/Zephyr CSV · TestRail CSV

Gherkin (.feature) · Playwright spec

AUDIENCE

Who ShuddhiQA is for

- **QA engineers & test leads — cut test design from hours to minutes**
- Enterprise QA teams on D365 / Salesforce / SAP / ServiceNow
- Consultancies delivering multiple platforms with one workflow
- Solo devs & startups who need coverage without a QA hire
- **Anyone who wants AI test cases without handing over their data**

THE EDGE

Why not just use ChatGPT?

- **Purpose-built prompts per platform — not a generic chat**
- Provider choice + cost transparency — pick speed, depth, or price
- Interactive, exportable, push-ready output — not a wall of text
- Privacy-first BYO-key model — your data stays yours
- **End-to-end: generate → refine → export → push, in one place**

ROADMAP

Where ShuddhiQA is heading

- **Phase 1 — MCP server: call ShuddhiQA from Microsoft Copilot & Claude**
- Phase 2 — Microsoft AppSource listing for enterprise discovery
- Phase 3 — Deeper enterprise: per-module depth, team workspaces
- Ongoing — more platforms, more export targets, richer refine
